SAM9X75 System-in-Package (SiP) MPU with up to 2-Gbit DDR SDRAM

SAM9X75 SiP Data Sheet

Scope

This document is an overview of the main features of the SAM9X75 SiP microprocessor. The sole reference documents for product information on SAM9X7 Series microprocessors and DDR2/DDR3L SDRAM memories are listed in Reference Documents.

Introduction

The SAM9X75 SiP integrates the ARM926 Arm® processor-based SAM9X75 MPU with an up to 2-Gbit DDR SDRAM. By combining the SAM9X75 with a DDR SDRAM in a single package, PCB routing complexity, area and number of layers are reduced in the majority of cases. This makes board design easier and more robust by facilitating design for EMI, ESD and signal integrity.

The SAM9X75 SiP is available in three pin-to-pin compatible SDRAM memory types and densities:

- 512-Mbit DDR2 SDRAM
- 1-Gbit DDR3L SDRAM
- 2-Gbit DDR3L SDRAM

1. Features

- CPU Running up to 800 MHz
  - ARM926EJ-S Arm Thumb® processor
  - 32-Kbyte data cache, 32-Kbyte instruction cache, Memory Management Unit (MMU)
- Memories
  - One 176-Kbyte internal ROM
    - 80-Kbyte internal ROM embedding a secure bootloader program supporting boot on NAND Flash, SD Card, SPI or QSPI Flash; bootloader features selectable by OTP bits
    - 96-Kbyte ROM for NAND Flash BCH ECC table
  - One 64-Kbyte internal SRAM (SRAM0), single cycle access at system speed
  - Internal DDR2 or DDR3L SDRAM running at up to 266 MHz
  - External Bus Interface (EBI) supporting:
    - 8-bit NAND Flash with up to 24-bit programmable multi-bit error correcting code
  - One 10-Kbyte OTP memory for secure key storage with Emulation mode (OTP bits are emulated by a 4-Kbyte SRAM (SRAM1))
- System Running up to 266 MHz
  - Power-on reset cells, reset controller, shutdown controller, periodic interval timer, watchdog timer running on internal slow RC oscillator (32 kHz typical) and real-time clock running on slow crystal oscillator (32.768 kHz)
  - Two internal trimmed RC oscillators with typical values: 32 kHz (slow) and 12 MHz (fast)
  - Two crystal oscillators: 32.768 kHz (slow) and 20 to 50 MHz (fast)
  - One PLL for the system and one PLL optimized for USB high-speed operation (480 MHz)
    - One PLL for audio operations, with dedicated output clock
    - One PLL in LVDS I/F (LVDS usage only)
    - One PLL in MIPI DPHY (MIPI DSI usage only)
  - One dual-port 16-channel DMA controller
  - Advanced interrupt controller and debug unit
  - JTAG port with disable bit in OTP memory
  - Two programmable clock output signals
- Low-Power Modes
  - Backup mode with RTC, eight 32-bit general-purpose backup registers, and a shutdown controller to control the external power supply
  - Clock generator and power management controller
  - Software-programmable ultra-low power modes: very slow clock operating mode (ULP0) and no-clock operating mode (ULP1) with fast wake-up capabilities
  - Software programmable power optimization capabilities
- Peripherals
  - LCD controller with overlay, alpha blending, rotation, scaling and color conversion; up to 720p resolution
    - RGB, LVDS, MIPI-DSI interfaces
  - 2D graphics controller supporting fill BLT, copy BLT, transparent BLT, blend/alpha BLT, ROP4 BLT (raster operations) and command ring buffer

- – Image sensor controller with ITU-R BT; 601/656/1120 video interface support up to 5 Mpixels; support of raw Bayer 12, YCbCr, monochrome and JPEG compressed sensors up to 12 bits
  - • MIPI CSI2 I/F support
  - • 12-bit parallel I/F support
- – One high-speed USB device, three high-speed USB hosts with dedicated on-chip transceivers
- – One 10/100/1000 Mbps Ethernet Mac controller with IEEE-1588 and TSN support, RGMII and RMII support
- – Two 4-bit secure digital multimedia card controllers
- – Two CAN FD controllers with timestamping
- – One Quad/Octal SPI controller
- – Two 3-channel 32-bit timers/counters
- – Two high-resolution (64-bit) periodic interval timers
- – One synchronous serial controller
- – One inter-IC sound multi-channel controller with TDM support
- – One audio class D controller with single-ended or bridge-tied load connection to power stage
- – One 4-channel 16-bit PWM controller
- – Thirteen FLEXCOMs (USART, SPI and TWI/I2C)
- – One 8-channel, 12-bit, analog-to-digital converter with 4/5 wires resistive touchscreen support
- Hardware Cryptography
  - – SHA (SHA1, SHA224, SHA256, SHA384, SHA512) and HMAC compliant with FIPS PUB 180
  - – AES: 256-, 192-, 128-bit key algorithms compliant with FIPS PUB 197
  - – AES/SHA tight coupling for IPsec hardware acceleration
  - – TDES: 2-key or 3-key algorithms compliant with FIPS PUB 46
  - – True random number generator compliant with NIST Special Publication 800-22 Test Suite and FIPS PUBs 140-2 and 140-3
  - – Key bus providing private key transfers between AES, TDES, TRNG, OTPC
  - – Physical Unclonable Function (PUF) including NIST SP 800-90B (DRNG) and embedding four Kbytes of SRAM (PUFSRAM)
- I/O Ports
  - – Four 32-bit parallel input/output controllers
  - – Up to 106 programmable I/O lines multiplexed with up to four peripheral I/Os
  - – Input change interrupt capability on each I/O line, optional Schmitt Trigger input
  - – Individually programmable open-drain, pull-up and pull-down resistors, synchronous output
  - – General-purpose analog and digital inputs tolerant to positive and negative current injection
- Package
  - – 16x16 mm^2, 0.8-mm pitch, 243-ball BGA optimized for standard class PCB layout (down to four layers)
- Design for Low ElectroMagnetic Interference (EMI)
  - – Slewrate-controlled I/Os
  - – DDR PHY with impedance-calibrated drivers
  - – Spread spectrum PLLs
  - – BGA power/ground ball assignment to provide optimum decoupling capacitors placement

Microchip

- Operating Conditions
  - Ambient temperature (T_A) range:
    - -40°C to +85°C for SAM9X75D5M, SAM9X75D1G, SAM9X75D2G
    - -40°C to +105°C for SAM9X75D5M
  - Junction temperature (T_J) range: -40°C to +125°C

2. Ordering Information

Ordering Code[1][2]	Memory Type	Memory Size	Package	Ambient Temperature Range
SAM9X75D5M(T)-V/4TB(-SLx)	DDR2 SDRAM	512 Mbits	TFBGA243	-40°C to +105°C
SAM9X75D5M(T)-I/4TB(-SLx)	DDR2 SDRAM	512 Mbits	TFBGA243	-40°C to +85°C
SAM9X75D1G(T)-I/4TB(-SLx)	DDR3L SDRAM	1 Gbit	TFBGA243	-40°C to +85°C
SAM9X75D2G(T)-I/4TB(-SLx)	DDR3L SDRAM	2 Gbits	TFBGA243	-40°C to +85°C

Notes:
1. For details on ordering codes, see Product Identification System.
2. For SL1, SL2 and SL3 device availability, contact a Microchip Sales representative.

3.   Product Identification System

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

SAM9   X75 D1G   T – I   /   4TB – SL3

Architecture

Product Group

Memory

Carrier Type

Temperature

Package

Software License Level
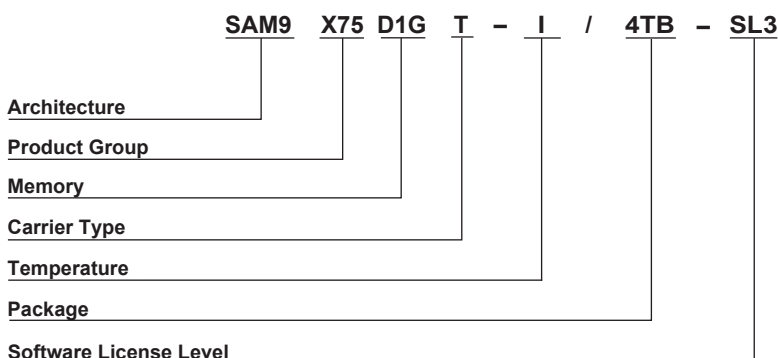

Architecture:	SAM9	= ARM926EJ–S Arm Thumb microprocessor
Product Group:	X75	= General purpose microprocessor
Memory Type and Size:	D5M	= 512-Mbit DDR2 SDRAM
	D1G	= 1-Gbit DDR3L SDRAM
	D2G	= 2-Gbit DDR3L SDRAM
Carrier Type:	Blank	= Standard packaging (tray)
	T	= Tape and reel
Ambient Temperature Range:	I	= –40°C to +85°C (industrial)
	V	= –40°C to +105°C (extended industrial)
Package:	4TB	= TFBGA243
Software License Level:	Blank	= Standard
	SL1	= Level 1
	SL2	= Level 2
	SL3	= Level 3

Example:
- SAM9X75D1GT–I/4TB-SL3 = ARM926EJ–S Arm Thumb microprocessor, 1-Gbit DDR3L SDRAM, tape and reel packaging, industrial temperature range, 243-ball TFBGA package, software license level 3

Note:
The Tape and Reel identifier and the Software License Level identifier only appear in the catalog part number description. These identifiers are used for ordering purposes and are not printed on the device package. Check with your Microchip Sales Office for package availability.

4. DDR2 SDRAM Features

The SAM9X75 SiP is available with a 512-Mbit DDR2 SDRAM memory option.

For power consumption, electrical characteristics and memory timings, refer to the manufacturer's documentation listed in Reference Documents.

- Power Supply: DDRM_VDD = 1.8V ±0.1V
- Double Data Rate architecture: two data transfers per clock cycle
- CAS latency: 3
- Burst length: 8
- Bidirectional, differential data strobes (DQS and DQSN) are transmitted/received with data
- Edge-aligned with read data and center-aligned with write data
- DLL aligns DQ and DQS transitions with clock
- Differential clock inputs (CLK and CLKN)
- Data masks (DM) for write data
- Commands entered on each positive CLK edge; data and data mask referenced to both edges of DQS
- Auto-Refresh and Self-Refresh modes
- Precharged power-down and active power-down
- Write data mask
- Write latency = read latency - 1 (WL = RL - 1)

5. DDR3L SDRAM Features

The SAM9X75 SiP is available with 1-Gbit and 2-Gbit DDR3L SDRAM memory options.

For power consumption, electrical characteristics and timings of these memories, refer to the manufacturer's documentation listed in Reference Documents.

- Power supply: DDRM_VDD = 1.283V to 1.45V
- 2-Kbyte page size (x16)
- 8-bank operation controlled by BA0, BA1 and BA2
- Burst lengths (BL): 8 and 4 with Burst Chop (BC)
- Precharge: auto-precharge option for each burst access
- Auto-Refresh and Self-Refresh modes
- Average refresh period:
  - 7.8 µs at T_J ≤ +85°C
  - 3.9 µs at T_J ≤ +105°C
  - 1.95 µs at T_J ≤ +125°C
- High-speed data transfer realized by the 8-bit prefetch pipelined architecture
- Double Data Rate architecture: two data transfers per clock cycle
- Bidirectional differential data strobe (DQS and /DQS) transmitted/received with data for capturing data at the receiver
- DQS edge-aligned with data for reads and center-aligned with data for writes
- Differential clock inputs (CK and /CK)
- DLL aligns DQ and DQS transitions with CK transitions
- Commands entered on each positive CK edge; data and data mask referenced to both edges of DQS
- Data mask (DM) for write data
- Posted CAS by programmable additive latency for better command and data bus efficiency
- MultiPurpose Register (MPR) for predefined pattern read out
- ZQ calibration for DQ drive and ODT (pin DDRM_ZQ)
- Programmable Partial Array Self-Refresh (PASR)
- Self-Refresh Temperature (SRT) range: normal/extended
- Automatic Self-Refresh (ASR)
- Programmable output driver impedance control

6. Configuration Summary

Feature	SAM9X75D5M	SAM9X75D1G	SAM9X75D2G
Package	BGA243, 16x16mm^2, pitch 0.8 mm		
EBI	8-bit NAND Flash controller		
SDRAM embedded in SiP	512-Mbit DDR2 SDRAM	1-Gbit DDR3L SDRAM	2-Gbit DDR3L SDRAM
Ambient temperature range	−40°C to +85°C		
	−40°C to +105°C	−	−
MIPI DPHY	Bidirectional, 4 lanes		
PIOs	106		
SRAM0/SRAM1	64/4 Kbytes		
Quad/Octal SPI	1		
LCD + GFX2D	LVDS, MIPI DSI, RGB interface		
Camera interface (ISC)	MIPI CSI2, parallel port		
GMAC	10/100/1000 with IEEE 1588 and TSN		
CAN-FD	2		
USB	3 (3 hosts or 2 host/1 device)		
UART/SPI/I2C	13		
SDIO/SD/MMC	2		
I2SMCC/SSC/Class D	1/1/1		
ADC inputs	8 (8 channels)		
64-bit timers/32-bit timers	2/6		
PWM	4 (PWMC)		
Cryptography	AES/TDES/SHA/TRNG

10. Electrical Characteristics

Electrical characteristics, schematics, procedures and recommendations are the same as those given in the SAM9X7 Series data sheet (see Reference Documents).

- The VDDQ and VDD power inputs described in the DDR2 SDRAM and DDR3L SDRAM data sheets are connected to the SAM9X75 SiP balls called "DDRM_VDD". Therefore, the requirements placed on VDDQ and VDD power inputs in the "Absolute Maximum Ratings" and "Recommended DC Operating Conditions" sections of these data sheets apply to the DDRM_VDD power inputs.

- The VDDIN25 input powers the LVDS PLL of the device. It must be connected to VDDOUT25 on the PCB. From an Absolute Maximum Ratings perspective, VDDIN25 has the same specification as VDDLVDS.

10.1 Recommended Thermal Operating Conditions

Table 10-1. Recommended Thermal Operating Conditions

Symbol	Parameter	Conditions	Min	Max	Unit
T_A	Ambient temperature range	SAM9X75D5M(T)-V devices	-40	105	°C
		SAM9X75D5M(T)-I devices		85	°C
		SAM9X75D1G(T)-I devices			°C
		SAM9X75D2G(T)-I devices			°C
T_{J_MPU}	Junction temperature range	–		125	°C
T_{J_DDRx}		–			°C

Table 10-2. BGA243 Package Thermal Characteristics[1][2]

Symbol	Parameter	Typ	Unit
R_{JC}	Junction-to-case thermal resistance	7	°C/W
R_{JB}	Junction-to-board thermal resistance	25	°C/W
$\Psi_{J\text{-top}}$	Junction-to-package-top characterization parameter	0.31	°C/W

Notes:

1. $R_{JA} = (T_{J\_MPU} - T_A) / P_{TOT}$, where T_A is the ambient temperature and P_{TOT} is the power consumption of both the processor and the embedded DDR memory. The DDR SDRAM junction temperature is always lower than the MPU junction temperature.

2. The package characteristics in the above table are provided according to the JEDEC JESD51-2 standard with the 2s2p board and 0 m/s air flow. These values are not directly applicable to the final application. As per JEDEC standards, these parameters represent the device mounted on a specific PCB under controlled conditions. In real-world applications, the PCB design and construction, airflow, and other factors may significantly impact thermal characteristics.

10.2 Power Sequences

The DDR SDRAM power rail (DDRM_VDD) must be connected to VDDIOM on the PCB. Refer to the section "Recommended Power Supply Sequencing" in the SAM9X7 Series data sheet (see Reference Documents).

10.3 Device Power Consumption in Applicative Use Cases

Table 10-4 provides the processor power consumption in the following conditions:

- f_{CPU_CLK} = 800 MHz
- f_{MCK} = 266 MHz
- I & D caches are enabled.
- Use cases run on Linux®.

- Current consumptions are measured as shown in Figure 10-1. Note that external component current consumptions are not counted.
- Ambient temperature: 25°C

The measurements are provided for typical SAM9X75D1G and SAM9X75D2G devices.

Figure 10-1. Current Measurement for Applicative Use Cases (DDR3L Example)
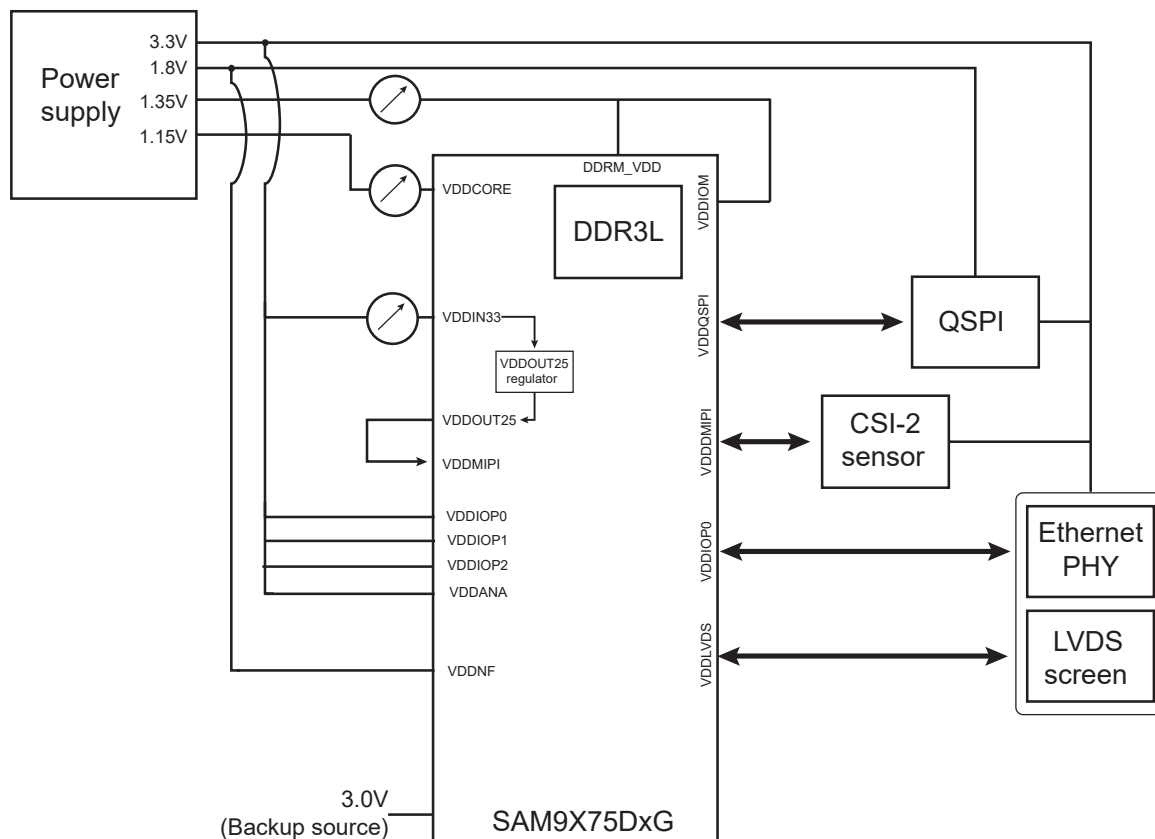

Table 10-3. Use Case Definition

Use Case	Description
1	After Linux boot root prompt
2	Running 2D graphics benchmark with EGT monitor (800x480 DSI panel @ 46 fps) - 22% CPU usage
3	Run Bonnie++ on USB mass storage
4	SAM9X75 running as iPerf server
5	Image sensor video recording with QVGA resolution - 10 fps

Table 10-4. Power Consumption (mW) in Applicative Use Cases

Use Case	VDDCORE 1.15V	VDDIOM+DDRM_VDD		VDDIN33 3.30V	Total (DDR3L)	Total (DDR2)
		1.35V	1.80V			
1	135	41	45	165	341	345
2	165	55	60	125	345	350
3	190	84	57	115	389	362
4	165	95	108	165	425	438
5	170	61	–	330	561	–

10.4 SDRAM Power Consumption in Idle and Ultra-Low Power (ULP0, ULP1) Modes with SDRAM in Self-Refresh

For a complete description of how to enter and exit ULP0 or ULP1 mode, refer to the SAM9X7 Series data sheet (see Reference Documents).

Table 10-5. Typical Power Consumption in Idle, ULP0 or ULP1 Mode on VDDIOM and DDRM_VDD

VDDIOM DDRM_VDD	T_A= -40°C	T_A= 25°C	T_A= 50°C	T_A= 70°C	T_A= 85°C	T_A= 105°C	Unit
1.35V (DDR3L)	3.7	4.3	5.1	6.3	7.7	–	mW
1.8V (DDR2)	3.7	3.8	3.9	4.2	4.4	5.5	

11. Mechanical Characteristics

11.1 243-Ball TFBGA Mechanical Characteristics

243-Ball Thin Fine-Pitch Ball Grid Array (4TB) - 16x16x1.23 mm Body [TFBGA]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging

Solder mask opening	0.350 mm
Solder mask definition	Solder Mask Defined (SMD)
Solder	SAC105

12. Marking

Top marking follows the scheme below:
with possible values:

Line	Description	Values
1	Company logo	Microchip logo
2	Company name	Microchip
3	Device name	SAM9X75D5M SAM9X75D1G SAM9X75D2G
4	Temperature code/Packaging code, Jedec symbol	I/4TB ⓔ8
5	Lot traceability, Arm logo	YYWWNNN ARM

13.   Revision History

13.1   DS60001827C - 12/2024

Changes
Throughout: added content related to the 512-Mbit device (SAM9X75D5M)

Updated:
- Reference Documents
- Ordering Information
- Product Identification System
- Block Diagram
- 243-Ball TFBGA Pinout figure
- D11 and H13 information in Ball Description table
- BGA243 Package Thermal Characteristics table
- Typical Current Consumption in Idle, ULP0 or ULP1 Mode on VDDIOM and DDRM_VDD table

13.2   DS60001827B - 11/2023

Changes
Various updates, including in document title and Configuration Summary

13.3   DS60001827A - 09/2023

Changes
First issue.

MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE, OR WARRANTIES RELATED TO ITS CONDITION, QUALITY, OR PERFORMANCE.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL LOSS, DAMAGE, COST, OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION.

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip products are strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable". Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.
